郑智生 大中华总裁 励展博览集团

On behalf of Reed Exhibitions, I would like to welcome all of you to Lightweight Asia 2019! It's a great pleasure for me to join you here in Shanghai for this industry fanfare.

With the transformation and upgrading of the automotive industry and the continuous development of new energy vehicles, China has seen dramatic developments in automotive lightweight. The Ministry of Industry and Information Technology pointed out that automotive lightweight is an important direction of automobile development, and urged that we establish a cooperative upstream and downstream mechanism of automotive lightweight materials and expand the application of various materials in new energy vehicles, special vehicles, transport vehicles and other fields. The government's strategic ideas and policy measures have played a positive role in promoting automotive lightweight.

In response to the government call for driving automotive lightweight, we are hosting the second edition of the Lightweight Asia based on market needs. The Lightweight Asia 2019 will focus on advanced automotive lightweight materials, processing technology and equipment, automobile parts and other automotive lightweight products and solutions at home and abroad. The show aims to build a platform of information sharing and technical exchanges for suppliers and design, R&D, technology and purchasing staff of automobile and parts enterprises.

At the show, the Auto Lightweight Achievements Display Zone will spotlight excellent, innovative lightweight components, integrated lightweight solutions, cutting-edge lightweight technology and frontier technology. Meanwhile, the Metal + Nonmetal Conference will thoroughly analyze the cutting-edge applications and development trends of different materials in passenger, commercial and new energy

I believe this exhibition will bring a feast of lightweight solutions to all industry professionals.

Finally, I would like to thank all the leaders, exhibitors, industry scholars, professional buyers and media friends for your support. I wish this exhibition a complete success!

Magnesium alloy logistics carriage:

its weight is reduced by more than 55% compared with the same kind of steel carriage, and the same kind of aluminium carriage is reduced by about 30%. It has the characteristics of strong damping and shock resistance, good handling and short braking distance. The fuel consumption can be reduced by 6%~8% for every 10% reduction in the weight of General Logistics vehicles. Therefore, the fuel consumption of magnesium alloy logistics cars will be significantly reduced, which will increase the freight volume of trucks and protect the environment with low carbon.

镁合金物流车厢:

自重比同类钢质车厢减轻 55% 以上,同类铝质车厢减轻约 30%,兼具阻尼减震性及抗冲击能力强、操控性好、刹车距离短等特点。一般物流车辆自重每减少 10%,燃油消耗可降低 6%~8%,因此镁合金物流车厢油耗会显著降低,进而增加货车载货量,并低碳环保。

Under the general trend of energy conservation and emission reduction, the concept of automobile lightweighting was born. About lightweighting can now be interpreted in three ways, lightweight materials, lightweight design, and lightweight joining processes. Laser welding of aluminum alloys is the perfect combination of these three. Laser welding can effectively reduce the thermal deformation of other welding processes, and can reduce the amount of material used for flanging.

Nanjing Raycham Laser welding system integrates 3 sets of IPG lasers, laser oscillating welding heads, brazing heads and some peripheral facilities. The front and rear door panels of the side panels and the laser deep-welding of the connecting edges of the top cover are realized; the laser brazing of the backflow water tank is realized. And the welding pass rate reaches 99%.

在节能减排的大趋势下,汽车轻量化的概念孕育而生。关于轻量化目前可以从三个方面来诠释,轻量化的 材料,轻量化的设计,轻量化的连接工艺。铝合金的激光焊正好把这三者完美的集合在一起。激光焊能够 有效的减少别的焊接工艺完成的热变形,在设计时还能减少翻边的用料量。

南京中科煜宸的激光焊接系统集成 3 套 IPG 激光器、激光摆动熔焊头、钎焊头及一些外围设施。实现侧围外板前后门洞,顶盖连接边的激光深熔焊;后流水槽的激光钎焊。并且焊接合格率达到 99%。

1 Continuous Strip Plating on aluminum

Switch material from copper to aluminum, to cut cost and save weight. Aluminum strip is not suitable for current-carrying parts due to surface oxide films. But with our continuous strip plating, surface electrical resistance is at the same level as copper, and great

solderability. Used as lightweight conductive material in the electronics and energy industries. Our production technology and quality assurance provide high quality and stable supply.

2 Unique high-function Tin plating (N-Sn)

Our Tin plating has advantages such as discoloration resistance, great solderability and no reflow

N-Sn plating on terminals such as electronic components, make soldering more reliable and better performance for electronics.

Continuous strip plating with high quality in three factories in Japan, under the same anagement. High performance and low price are realized by combining our in-house slitting and partial plating.

拉丝型抽芯铆钉

拉丝型抽芯铆钉又称口杯型抽芯铆钉,属于结构型铆钉,拉铆后钉芯断钉处会翻边入铆体凹槽内,锁紧钉芯。内锁拉丝帽檐内壁直径略小于官帽内径,铆钉充分膨胀后,略小内径菱角材料会挤入钉芯断裂点下部 一条沟槽内,起到锁紧作用。

灯笼型抽芯铆钉

灯笼铆钉能形成三个大的折角,分布在较大面积上,分散了铆接面的载荷。这一特点使得灯笼铆钉可以用在易碎的或较软的材料上,也可以用于铆接大孔和形状不规则的孔,灯笼铆钉主要用于汽车上,比如塑料仪表盘,车内饰拼,配件等。可替代铆件底部加垫的特点。大帽沿铆钉可以替代前后两面加垫的特点,使铆接面积增大,分散铆接载荷。

Suzhou Hagong Wwwelding Automation Co., Ltd. (abbreviation: HGWZ) is a solution supplier focus on new energy vehicle lightweight production line. Based on AWJ and HGZN (stock code: 000584), HGWZ has broken through a series of key technologies and developed the first robot friction stir welding standardized production line in China. This line is special for battery cold plate, battery tray and motor shell.

The production line mainly overcomed the problems of weld deformation, serious flash and low joint efficiency during friction stir welding of thin aluminum plate. It realized full-automation, high speed (welding speed of 1.5m/min) and no flash weld.

All the key members of HGWZ are from HIT or KUKA. We attached great importance to the R&D and industrialization of advanced technology. We have developed non-flash and non-thinning FSW technology, non-destructive testing technology, self-supporting FSW, refill FSW technology, refill solid-state spot welding technology and so on.

苏州市哈工万洲自动化有限公司(简称:哈工万洲)是一家专注于新能源汽车轻量化产线解决方案的供应商。哈工万洲依托于哈工大先进焊接与连接国家重点实验室和哈工智能(股票代码:000584),以先进的搅拌摩擦焊技术为基础,突破多项关键技术开发了国内首条适用于新能源汽车电池水冷板、Pack 箱体、电机壳体等结构的机器人搅拌摩擦焊标准化生产线。

产线技术重点克服了薄板铝合金电池托盘搅拌摩擦焊过程中变形大、飞边严重、焊接效率低等问题,实现了自动化、高速(焊接速度为 1.5m/min)、无飞边焊接。

哈工万洲核心骨干成员均来自哈工大或 KUKA,团队非常重视前沿技术的研发和产业化,先后开发了无飞边无减薄搅拌摩擦焊技术、焊缝无损检测技术、自支撑搅拌摩擦焊技术、填充式搅拌摩擦焊技术、回填式固相点焊技术、铝铜焊接技术、铝钛焊接技术、铝钢焊接技术等。
